Telegram login online with phone number

This post is from February 2018. For up-to-date information on integrating services with Telegram please see this post. For Telegram widgets, see this page. Today we present a Telegram Link Widget for external websites. When you first use the Telegram connection, our widget asks for your phone number and sends you a telegram confirmation message to authorize your browser. Once this is done, you get a two-click link to each website that supports telegram sign-in: Login Link Confirmation will send Telegram your name, username, and profile picture to the website owner. Your phone number remains hidden. The website can also ask permission to send you messages from their bot. Permission to talk telegram bots is a powerful communication tool, but to date could not start a conversation. Even if you wanted them to contact you, you had to talk to them first. With the new login widget, the transition from interacting with a website to a conversation in Telegram is completely frictionless. Message from a bot Possible cases of use are unlimited. Bots could be used to provide customer support, accept payments, or send notifications of any kind , including account statements, shipping tracking, flight updates, and more. Keep control After each connection, Telegram will send you a concise message about the permissions you have granted and the data you have forwarded to the owner of the Web site. You can revoke the authorization by pressing the appropriate button below the link summary. Telegram for Android 4.8, also released today, includes a section in privacy & security settings that lists all the websites where you are logged in using Telegram. Other applications will soon follow. This simple logon tool is the first phase of the Telegram ID project, which will be released throughout this year. February 6, 2018, Telegram Team PS Don't miss the other updates we've launched in recent days: Telegram onlineThe Telegram messenger originally appeared as an app for smartphones and tablets; after a while, developers released the desktop version for popular Oss such as Windows, OS X and Linux. And Telegram finally confirmed its cross-platformness by displaying an online version. This is the online version of the popular messenger that we will discuss in this article. Telegram online - is the ability to import the telegram from any browser without using the login application. In October 2014, the online telegram messenger officially appeared. In everyday life, the web version of Telegram is usually called Telegram Online.Telegram Online will be particularly useful when the user, for example, has to write a large amount of text for his Telegram channel, and is out of his home or work and his laptop is not at hand. Thanks to the online version, a user can log into their account through an Internet browser in an online club or away and use most of the messenger features. Telegram Telegram it will also be convenient for those users who like all the necessary applications to be assembled in the browser. For example, GoogleDoc is open on one tab, plays online radio in the background, and in the third, communication with friends on Telegram is in full swing. In any case, after reading this article, you will conclude how Telegram Online can be useful to you. How to import Telegram online To enter Telegram online you need: Go to the official Telegram website. Enter the phone number. Wait for the confirmation code and type it. Start using Telegram online. And now let's take a closer look at how to use the web version of Telegram. First of all, you should know that registering a new Telegram account in the web version is not possible. To sign up, you still need a desktop client or mobile version. You can import Telegram online with only one existing account. So the algorithm of actions you need to follow to complete the link is as follows: First you need to go to the official website . Please note that by searching Google for Telegram online links may appear on unofficial Telegram websites, which can easily be compromised by scammers. Be careful and make sure that this address the phone number you specified when you signed up for your account. When you enter your phone number, the country of your residence will be determined, provided that the browser is allowed access to your device's location. Telegram Login Page OnlineWait for the password that will come to your smartphone in the form of SMS or message in the mobile version of Telegram. Also note that you can only enter Telegram online using your phone number. If you are required to provide other data, then you probably have come to a mirrored (unofficial) site, so leave it immediately. Enter your password. If you've turned on 2-step verification, you'll need to enter a cloud password in the web version. Enter telegram password onlineOn completing the above steps, you will have access to the web version of Telegrams.You can also watch the video tutorial: How to use web telegram on the computer / browser If you have problems accessing the Telegram website, we recommend the article: Telegram Proxy. How to install MTProto Proxy.The functionality of telegram settings online is limited, contrast with mobile and desktop versions. After you enter Telegram settings online, the following options will be available: Change profile picture. To do this, you need to click on the camera icon and download the image from the hard drive. Change the user name. To use this option, you must click Edit in the upper-right corner of the window. Configure conversation notifications. By moving the corresponding sliders, you can configure pop-up desktop and background notifications. Set up audio. By moving the slider, you can turn off or turn on the sound of notifications, as well as by manipulating the slider to increase the to send a message. There are two options for key settings that you can choose from. The first option: send a message when you press Enter and switch to a new line using Shift + Enter. Password change. With this option, you can delete your current cloud password and set a new one. Change the language of the interface. With this option you can change the English language to Spanish, German, Italian, Dutch, and Portuguese.View and close active sessions. With this option, you can check for active sessions (if you're signed out of your Telegram account on other media) and close them. Telegram telegrams times onlineTaxes from the normal versionNext, we look at the main differences between Telegram online from the normal version. Let's start with functionality. In Telegram, the online operation is not as extensive as in the normal version. The following are the most important features of the web version. InterfaceS displaying the web version is intuitively simple. The same well-known menu icon as three horizontal stripes. The same arrangement of talks on the left side. The same default color theme as in the regular version. But the color theme in the web version cannot be changed - there is no such option. By clicking on the well-known burger icon, you will be taken to a menu where you will see that there are fewer options than in the normal version. Only these options will be available to you:New group. Also, as in the regular version, you can create new groups with members. Contacts. Here you can create new contacts and delete them. Settings. Functionality settings described above. Telegram F.A.Q. (Questions about Telegram). This option includes a link to a site with questions about telegrams. About. This option will display a window with information about the current version of Telegram. Telegram the online menu The chat creation algorithm is the same as in the normal version. The only thing is that there is no way in Telegram Online to group conversations into folders, since the very possibility of folders does not exist. There is also no option to archive conversations. All conversations you've ever created will appear on the left side of the browser window. The option to search for words in conversations is the same as in the normal version. New groups in the web version can be created by adding members that exist in the but the new channels can't. But the search option for groups and contacts is the same as in the normal version. The contact list can also be edited, as in the normal version There are options for adding new contacts, editing, and blocking existing ones. In Telegram online, as in the normal version, it is possible to filter mail from the message type (links, photos, recordings, video files, voice messages). But if this option in the normal version opens it opens click on the contact profile, then in the web version to access it you need to click the icon in the selected conversation in the form of three vertical dots, which is located in the upper-right corner of the window. In the menu that opens, a list of message types will open. For example, clicking Photos will show all messages that contain photos in the conversation. Message filtering menu from message typeEmoticons and stickersIn Telegram online, you can also use a wide variety of emoticons and stickers, but the web version does not support animated emojis and stickers. Also, there is no way to add new sets of stickers, so you should only use the stickers you added from the normal version. If your interlocutor sent you an animated sticker or emoji, the following message will appear in the online version:This message is not currently supported on telegram web. Try getdesktop.telegram.org. Telegram Online SecurityTo live on the most burning issue. What is the security situation with Telegram online? Although the online version does not have the ability to create secret conversations, security remains high. Regardless of whether the conversation is secret or not, the information from the mail goes to Telegram servers that are already encrypted and the encryption keys themselves are stored on users' devices. Telegram is one of the most trusted messengers in the world. To make sure your data is kept safe and healthy, t9gram recommends following simple rules. Set a cloud password. You can read more about this in our Article Telegram Cloud Password. When using Telegram online, always close the session when you leave your account. To do this, just go to Settings and click Disconnect. Log out of Telegram Online AccountAdvantages and Disadvantages To summarize our review of the pros and cons of Telegram online. BenefitsOne of telegram online's most obvious benefits is the ability to connect to your account from any device. The main thing is the availability of the Internet. At the same time, you can use the usual browser: from Chrome to Safari. Cloud data storage is supported by the web version of the app, which means you can always continue the dialogue that started in the mobile or desktop app. All dialog boxes, contacts, conversations, bots, channels, groups are synchronized across your devices. By the way, telegram's main plus online that you can use it without having the application installed. Once you've registered an account in a mobile or desktop app, you can delete the app from your device and always use only the web version. In this case, passwords to enter your account will be sent as SMS to your phone. Which, incidentally, distinguishes Telegram online from the web versions of other direct messengers. For example, the main competitor Telegram WhatsApp messenger in the web version will not work without the installed application on your device. Because each you sign in to the web version of WhatsApp, you'll need to scan a QR code using the installed app on your smartphone. In our opinion, an extremely uncomfortable feature. Telegram vs. WhatsApp. Durov vs Zuckerberg Another important advantage is that if you accidentally close the browser tab in which the messenger site is open, this will not lead to exiting the account. You just need to reopen the site. Support for basic functions such as chats with bots, creating conversations, installing and editing contacts will allow you to fully enjoy the work of the messenger in your favorite browser. By the way, in Telegram online you can also send files and voice messages. DisadvantagesThe first obvious flaw of Telegram online is the lack of secret conversations. Unfortunately, the main feature of the messenger does not apply to the web version. But as we wrote above, this doesn't become a less secure messenger. Those who are used to making telegram calls also wait for a pity. This feature is not available on Telegram online. Apparently, this was done so as not to overload the service. Keep in mind that in the absence of the ability to make calls, you can use the send voice messages option. In Telegram online it is impossible to change the subject. If you are fond of a dark topic, then in the web version of messenger you should do without it. There is no way to add new sticker sets or edit existing ones. Innovations in the form of animated stickers and emojis also remained on the side of the electronic version. Sad cat stickerYou can group existing conversations into folders in Telegram, as mentioned above. You also can't create new channels and play games. If there is an option to set an additional password in Telegram online, then there is no automatic lock setting. You cannot register a new account and change the number of the mobile number attached to the account. Obviously, the lack of this option is related to security issues. Now you are familiar with the features of the web version of the popular messenger, you know about its disadvantages and advantages. Despite the cut functionality and minimalist interface, Telegram Online will be convenient for reading channels, exchanging messages, files, interacting with bots and listening to music in Telegram Telegram Video Calls: When a team promises to launch Video CallsSearch Telegram Channels.
